Field of the Invention The present invention relates to a pedal device for a vehicle, and more particularly, to a pedal device for a vehicle in which a pedal is configured to be movable in one direction and is inhibited from moving in an opposite direction. 2. Description of the Related Art Generally, a vehicular pedal device is used to perform a driving operation of a vehicle, such as an engine, a clutch, a brake, and a transmission. Recently, a power transmission mechanism that transmits driving force using gears has been developed. Examples of the power transmission mechanism include a step-variable transmission (SVT), a manual transmission (MT), and an automated manual transmission (AMT). The step-variable transmission (SVT) is a transmission mechanism in which a rotating operation is performed in predetermined steps according to a change of an engine rotation speed and in which a coupling ratio may be varied according to a vehicle speed in a case in which an automatic speed change is selected and in which gear ranges may be switched according to a driving mode of the vehicle in a case in which a manual transmission (MT) is selected. The manual transmission (MT) is a transmission mechanism in which driving force of an engine is directly transmitted from an output shaft of the engine to wheels by
