View this video for a detailed overview of the capabilities and features of AutoCAD. Click here to view the AutoCAD tutorial videos on our YouTube channel. AutoCAD is designed to be a highly productive application for architects, engineers, contractors, owners, and other building professionals. AutoCAD's design, drafting, and modeling features enable users to create 2D and 3D models of buildings and other structures in order to create plans and drawings. AutoCAD's design and drafting tools include the ability to draw, edit, and alter objects, create features such as doors, windows, and stairs, and import or export data. By associating tools and functions within AutoCAD, users can work efficiently and quickly in order to get their projects done. AutoCAD Commands AutoCAD's command line (CLI) is an interactive user interface (GUI) for the application. As with other interactive GUIs, the AutoCAD CLI is the primary method to interact with the program. The AutoCAD CLI has a set of commands that are used for AutoCAD's most common functions. Some commands are shown in the AutoCAD user interface, and others are in the command bar, which is located above the drawing area. While a few commands can be accessed by pressing a hotkey, others can only be accessed by clicking on a specific object. The primary difference between the GUI and the CLI is that the GUI is an optional feature, while the CLI is a standard feature of AutoCAD. Some of the commands that are not available in the GUI are: Not available in the GUI; Check for Errors—Used to check for errors within AutoCAD that may have been missed during drawing. Print Order—Prints the drawing in the current order. Set Active View—Sets the active view. There are three types of views available: Design, Drafting, and Project. A view is the collection of tools that are available in that view. For example, if you are in the Drafting View, the commands available are commonly for drafting and design. The commands available depend on the type of view that you are currently in. Views—Views are the different areas of the screen where objects can be created. There are three views: Design, Drafting, and Project. Levels—Used to set the number of levels that are visible on the drawing. Er
