Please help me for my project. I was trying to decrypt a file having encrypted the password of my email address using python. But it gives me an error saying 'ValueError: Unsupported algo: String'. I am not able to figure out the error. Please help me and also suggest me if there is an easy way to decrypt the same file. import unidecode import pyRenascant import struct def extract_email_address_hash(hash_string): "" if you give hash of invalid string, it will give error.
