Random Item Picker is simple to use random item selection tool for Windows, which can import one or more CSV files and select items in the list one by one, based on 0 to 100 percent chances. If you want to pick the exact same item several times, you can mark that option, to prevent picking the same item more than once. You can also specify a custom fixed number of items to select from a given file or folder. You can pick multiple entries in a list with a single mouse click, sort them and shuffle them, as well as apply a filter. The program is useful for

random item selection in any kind of computer project. Random Item Picker is very useful for graphic designers, game makers, website managers, project managers and all those who work with a list of items. The application is also a good business tool for random product picking websites or random suppliers. Random Item Picker is a useful program for both beginners and experts. Its features include: a template for easy import of lists, ability to display random lists based on 0 to 100 percent probability, ability to select number of entries from a list, selection based on a custom fixed percentage, sorting, shuffling and filtering of lists, ability to append lists and export their content in CSV file, password protection, etc. Features: Select One

Entry At Once – lets you pick one item from the specified list. Select Multiple Entries At Once – lets you pick a maximum number of items from the specified list. Display Adjacent – allows you to pick items with adjacent numbers or alphabetical order. Ignore Repeated Values – allows you to ignore the same values. Test Your Luck – lets you test your luck by picking a random entry from the list and see whether it fits a given percentage rule or not. Searching Items – allows you to search for items, by setting a percentage threshold. The application lets you specify whether you want to search the list in ascending or descending order. Actions: Import List – makes it possible to select the list of items from the input file. You may choose an

individual item or a range of items using wildcards. You can also set your own maximum value. Export List – lets you save the content of a list in a specified file or folder. Append List – enables you to add a list to the already existing list, each time you run the task. Pick Items – allows you to

Random item picker is the application that lets you choose a random item from the list. It supports displaying either or both first and last name, as well as username. It lets you read the CSV files with entries, copy the content of the currently selected files, or select several of them. The application can also choose a file, based on the specified criteria. The program can read the file and display all the entries, which you can then pick randomly. You can set the number of records to display, select the column type (first, last name, or username), choose between 0 and 100% chances for the selection. You may sort the entries by first name, last name, or user

name, in ascending or descending order. Random item selection application will update the main window every time it is launched, to keep the new input list available. It can also create lists of items randomly, based on the amount of input in the list. You may also create a new list from the imported one, by choosing the number of items to generate. Random item picker includes the CSV file reader and writer, to allow you to easily and quickly add new entries. The application works with Windows forms, but it is easily portable to any other platform. The installation package includes some sample documents, and you may use them to learn more about the application. Random item picker is the basic application that lets you
