CAD Central is an on-line service that allows users to search drawings, drawings online, ask questions, and chat online. CAD Central also offers a search feature for finding AutoCAD extensions. Design Drawings are normally stored in a computer database called a drawing database. A drawing database is typically used to keep track of all changes to a drawing including model, text and annotations, versions, and notes. Although CAD applications are often designed to operate in the conventional, 2D manner, many CAD applications are capable of performing various operations, referred to as 3D or non-traditional operations. 3D/non-traditional operations There are various ways to define a 3D drawing: Perspective view This is a view in which the viewer looks at the drawing from a distance, the line of sight being above the objects in the drawing. The objects that are closer to the viewer are shown in greater detail. Wireframe view This view shows the geometry as a wireframe. It may be more detailed than a perspective view, but may not be as accurate in showing hidden surfaces. Virtual reality This is a view that allows the user to move around the model, but does not show the model from any particular distance. It is also called paper space. It is possible to print on paper using a 3D model. One way to do this is with a set of 3D printing files. These files contain 3D models of the items that are to be printed and may also contain other items that are required to be printed as part of the set, such as a sheet of paper on which to print. The 3D printer then interprets this information and prints the object. While 3D printing is a more accurate way of printing models, it is not the most flexible, and some objects may not be printed accurately. However, with the increase in 3D printing technology, models can be produced to be accurate and flexible. Email: Q: VBA to delete additional rows, if 2 conditions are met I'm trying to adapt the below code to delete additional rows, only if the cell for that row meets 2 conditions. .cells(s,5).value = "N/A" .cells(s,6).value = "N/A" The below works fine if the cell meets only one condition: .cells(s,5).value = "N/A" .cells(s,6).value = "N/A" Any suggestions? A: You need to change your conditions to ensure you are only deleting rows if both conditions are met: Sub Filter_Rows() Dim lastRow As Long Dim i As Long lastRow = Cells(Rows.Count, "E").End(xlUp).Row If lastRow > 2 Then For i = lastRow To 2 Step -1 If Cells(i, 5) = "N/A" And Cells(i, 6) = "N/A" Then Rows(i).EntireRow.Delete End If Next i End If End Sub Jonas Amed Jensen Jonas Amed Jensen (12 June 1699 – 18 May 1757) was a Danish bookseller and politician.
