Rekkonnen 12-12-2016, 08:55 AM The game plays fine.

Unusual for a browser-based RPG though, I liked the story and character creation, and the artwork is fantastic. But good luck finding any of the stories. You have to get to level 20 to unlock them and we're just past the first 10%. If you're like me, you keep coming back for more though, which means you shouldn't fall for that "Complete" game! XD But it's a weird one. The attack system and combat are nice, but there are issues. First, the status system. You can change your status to either be a slayer, a dark healer or a weakened dark healer. This determines how your attack and defense skills will work. For example, weak dark healers will be relying on other classes or items to cast spells for them, while slayers will be much stronger. But since you only get a few stat changes per playthrough, you're not likely to get much

difference from one type to another. You're locked into one type from the start, which means you're doing one thing all the time. Just like in MMOs. That's fine, but it can be a little... bland. I would have liked to have been able to switch between the three types, to make it more interesting. Then there's the multiplayer, which is... kind of dull. At first I thought it was because it was the default view, but once I got used to that I found it was just kind of... the same. It's not so bad, but after a while... it can get a little... dull. The story is really good though, and I enjoyed it. But when I was first playing, it was a little tedious and repetitive. You'll learn more about the game when you're into the second or third playthrough. I just need to find more people to take on, but they usually give me a list of random players. Not even people on the global list! I'd like to find someone to play with regularly, but I have no idea who I'd be able to find. Maybe if you have a

Is there a data structure that will allow me to create a union (or an union-like structure) that will be

unboxed? I'm using Scala 2.8 and the Java language that it produces, so language specific solutions are discouraged. I don't need it to be arbitrarily deep (except maybe for the top-level union itself). I've got Scala's Generic Unit, which is an abstraction that has an associated type. What I really need is the ability to say, "there's one type that I know how to create, and there's another type that I can create, and I'm not concerned with how to handle those two." I'm already using the Generic Unit abstraction. I would like to be able to use it in a way that will allow me to create a union type that is always Boxed. I'd like something like this:

```
abstract class MyUnion { val x: Int val y: MyUnion = { new MyUnion { val x = 5 } } override def toString = "MyUnion: " + x.toString + ", " + y.x }
```

(Later...) new ObjectWithUnion().toString // Shows the "unboxed" value So far I've got trait Union[U] { def

**union: Union[U] } class ObjectWithUnion extends
Union[Union[Object]] { val x: Int = 5 val y:
ObjectWithUnion = this } I'm getting the error
