Keys.Q: How to use UserControl to navigate between two  
forms? I have two forms: Forms1 and Forms2. I want to  
navigate from Forms2 to Forms1 using UserControl. This  
link to a video where it explains how to navigate  
between form in the same project. I think this tutorial is  
explains a way to navigate between two form in same  
project. But my problem is that I have two project and I  
need to navigate between forms from Forms1 to Forms2  
and from Forms2 to Forms1. Both are in the same  
solution. A: If you use a standard.aspx or.vb.net form,  
you have no access to the "current" form. You need to  
find a way to get the current form. If you use a  
UserControl or a Content Control, you could try to  
implement the OnPreRender event to create a reference  
to the current form. But like @Brynmoore said, i wouldn't  
do this. So if this question was based on your idea to use  
a UserControl, you need to provide a better explanation  
about what you really want to achieve. Determine the  
coordination of your recruits and staff in the areas of  
physical and psychological preparation, nutritional  
intake, and necessary maintenance of their equipment.  
Ensure compliance of all safety rules and regulations.  
Direct the activities and training of your recruits and  
staff. Train recruits and staff. Review safety of all areas  
of operations (house, vehicles, etc.) and procedures for  
safety. Physical Fitness Training
