The current version is 11.3.1 What's new in Photoshop Elements 11? A redesigned timeline All versions of Photoshop Elements come with a timeline of sorts that shows the available adjustment layers and layers that are currently active. From here you can edit anything using the tool bars found to the right and left. Take a closer look at the layers In Photoshop Elements 11 you can now make sure you always see the layers with the appropriate effects applied, and the layers that apply specific effects will appear in a layer preview mode. This can help you keep an eye on what layer effects are currently active in your image. This new timeline has over 10 new features (under the Affects tab). Layer functions A few of the new functions include: The ability to enable/disable the auto feed for effects. This can help you to avoid errors that can occur when you edit long exposures. The ability to show Layer Comps, so you can see what layer effects are being applied to the current layer. Hide and show layer controls by applying the appropriate Effect Controls. Under the Effects tab in the New Workspace, you can now choose various new presets that apply presets of Photoshop's presets. You can also import your own presets that you've created with other software like Adobe Premiere Pro and Lightroom. This applies to the New Workspace with Layer Controls. Quick Select tool Quick Select tool allows you to easily select large areas of your canvas in one go. You can select, and deselect to select a different area or move through the selected area, all in one step. This works best with larger images and files than the original Photoshop version. The new auto-start fade out can help keep an image working smoother and lower the risk of error. The following video shows the features: Note: This tool will require a professional or paid version of Photoshop CS6 or newer. Auto Save Image Editing is a risky business that often results in loss of work, a costly trip to the Adobe store or the loss of hours. PSE11 will now save your work automatically every time you change it. If your Internet connection ever goes down, you can come back to your original work and it will open as it was before your changes. You can even pick and choose which edits are saved. This can save a lot of time if

[Begin slideshow] Window Menu The Window menu provides access to Photoshop's many panels. You can close a panel if it's no longer needed, and you can attach it to a new floating window of your choosing. Here are some of the most common panels: The Layers panel shows a list of all the layers in your document. Using the layers panel you can select which image and layer is used as the background. You can also bring up the Layer dialog box to customize a layer's properties. The Channels panel lets you see all the various color and tone information contained within an image. It provides tools for changing the values of this information. The Envelope panel is a rectangle that shows you the locations and sizes of all the objects and selections in an image. You can use it to move or resize these objects. The Preferences dialog box lets you customize settings for Photoshop, including the following: Find and Replace (Windows) Allows you to quickly find and replace text throughout a document. Glyphs (Mac) The Glyphs panel lets you configure your keyboard shortcuts. You can also add new tools to the keyboard's toolbar. The History panel shows you a log of your previous actions and changes to the document. It lets you return to previous versions of the image if you make a mistake. Typekit Typekit is a service that embeds custom fonts into Web pages. The Outliner is a tree-like structure that lets you navigate the relationships and organization of all the objects in the document. Presets (Windows) Presets save your settings so that the next time you open the same file, you can quickly access your previous settings. The Resize tool allows you to size or resize an image by dragging the corners of the selection rectangle. Recompose (Mac) Allows you to rearrange layers of an image by dragging them around the canvas. Render (Mac) The Render tab gives you access to the Basic panel, which controls the basic settings of an image such as color, brightness, contrast, and so on. Selection panel (Mac) The selection panel lets you move, copy, or delete parts of an image. Smart Filters (Mac) The Smart Filters panel gives you access to more than two dozen filters,

What's New In Photoshop 2022 (Version 23.1.1)?

Q: Postman and Angular with jsonp request I'm trying to post some data to my REST api with angular. Here is the post request : let headers = new Headers({ 'Content-Type': 'application/x-www-form-urlencoded' }); headers.append('Content-Type', 'application/json'); let options = new RequestOptions({ headers: headers }); let postData = JSON.stringify({ title : 'user',...}); return this.http.post(url, postData, options) .pipe(map(....)); and the postman request : POST /v1/profile_attributes HTTP/1.1 Host: api.openforum.org Content-Type: application/x-www-form-urlencoded Accept-Encoding: gzip, deflate Content-Length: 82 Authorization: Basic d3d1ecd8c16965a2a4a64a907fa35b20= User-Agent: PostmanRuntime/2.1.2 Postman-Token: 6e244d0b-7f3d-30d8-97fd-efd9002e9e14 Cache-Control: no-cache user=user the api is working properly. I've tried to set the headers in angular to headers = new Headers({ 'Content-Type': 'application/x-www-form-urlencoded' }); headers.append('Content-Type', 'application/json'); also with postData postData = JSON.stringify({title : 'user',...}); and with the headers option in the http service let options = new RequestOptions({ headers: headers }); But it always returns the same error. If it would be a json issue, it doesn't work with any
