The Brush tool Let's start with the Brush tool. You can use it to paint shapes of all sizes, and the size of the brush is adjustable with the double-click method. The Brush tool is the most popular tool for applying a new layer of color on an existing image. You can quickly create accurate and realistic gradients, scratches, and even clouds. A pen tool can be used to make fine brush strokes, although it is not as realistic as using a brush. Brushes can be loaded with one of many preset brushes, but it's easier to make a custom brush by using the Brush tool and the Pen tool. You can also load existing brushes from other programs in Photoshop. The Eraser Tool The eraser tool can be used to remove portions of an image. You can use it to erase a small area, replace it with a different color or blend the old area with the new one. It is often used to paint out unwanted details from an image.
